LIMITED DECREASE IN NON-AGRICULTURAL UNEMPLOYMENT

Seyfettin Gursel^{*}, Gokce Uysal-Kolasin^{**} and Duygu Guner^{***}

According to the labor market statistics released by TurkStat on the 17th of January, non-agricultural employment has increased by 600 thousand and non-agricultural labor force by 171 thousand in the period of October 2010 (September-October-November). The rise in non-agricultural labor force remained below of its long run trend of 550 thousand. Given that the labor force has been increasing above its trend during the crisis, it is not surprising to observe a slower increase during the recovery. This limited increase prevents an increase in unemployment. Non-agricultural employment reached 17 million 67 thousand level corresponding to a 3.6 percent increase since October 2009.

The decrease in non-agricultural employment coupled with a minor increase in the non-agricultural labor force resulted in a 479 thousand decrease in non-agricultural unemployment (Figure 1). Hence, non-agricultural unemployment rate decreased to 14.1 percent in October 2010 from 16.4 percent in October 2009. Despite this drastic decrease, non-agricultural unemployment rate is still above its level prior to the crisis (12.9 percent).

Non-agricultural unemployment remains at the same level

Seasonally adjusted series show that non-agricultural labor force reached 19 million 821 thousand in October 2010 by an increase of 25 thousand. Furthermore, non-agricultural employment increased by 43 thousand and reached 16 million 928 thousand. Consequently, non-agricultural unemployment decreased by 17 thousand and non-agricultural unemployment rate fell to 14.6 percent (Figure 2). Although non-agricultural unemployment rate has been decreasing for the last six months, it is still early to conclude that it will continue in the upcoming months (Appendix 1 Table 1).

A large increase in agricultural employment

According to the seasonally adjusted series, agricultural employment rose by 141 thousand in October 2010 period. It is apparent that the increase in agricultural employment, which began in 2007, still continues (Appendix 1 Table 2, Appendix 2 Figure 3).¹

On the other hand, the decrease in employment in manufacturing observed for the last two months has stopped and the employment in services continued to increase. Clearly, the increase in non-agricultural employment is mainly driven by the expansion in service employment.

¹ Seasonal adjustment procedure is applied to each sector of employment series separately. Hence the sum of these series may differ from the seasonally adjusted series of total employment. The difference stems from the non-linearity of the seasonal adjustment process.
