Unemployment and Vacancies in Turkey: The Beveridge Curve and Matching Function

Birol Kanık, Enes Sunel and Temel Taşkın

The Central Bank of the Republic of Turkey

Sep 10, 2013 (BETAM)
The views expressed in this presentation are those of the authors and do not represent the official views of the Central Bank of the Republic of Turkey.
Introduction

The goal of the paper:

- To examine the relationship between unemployment and vacancies within the context of the Beveridge curve and Matching Function for Turkey.
- To investigate the compliance of these two labor market indicators of Turkish economy with the well documented characteristics of the relationship between unemployment and vacancies in the existing labor economics literature.
Introduction

Findings

- We find that Turkish Beveridge Curve depicts a negative relationship between vacancies and unemployment as theory suggests.
- The unemployment-vacancies pairs are found to follow a counterclockwise trajectory around the empirical Beveridge curve.
- The estimated Matching Function shows a positive relationship between job finding rate and tightness of labor market.
- The parameters of the estimated matching function are found to be different for different data sets (Kariyer.net vs. Turkish Employment Agency (TEA)).
- Disaggregated Beveridge curve shows different patterns for different types of unemployed.
Outline of the presentation

1. Theoretical Background
2. Empirical Literature
3. Data
4. Turkish Beveridge Curve and Matching Function
5. Disaggregated Beveridge Curve
6. Conclusion
Disequilibrium in segmented labor markets: real wage rigidities
Dow and Dicks-Mireaux (1958), Lipsey (1960) and Hansen (1970)
Diamond-Mortensen-Pissarides (DMP) model

\[ m(U_t, V_t) = \mu U_t^\alpha V_t^\beta \]

where \( \mu, \frac{dm}{dU} \) and \( \frac{dm}{dV} \geq 0 \), \( (1) \)

\[ \frac{dU_t}{dt} = s \times (1 - U_t) - m(U_t, V_t), \] \( (2) \)

Long run equilibrium: \( U_t = U, V_t = V \) and \( m(U_t, V_t) = m(U, V), \)

\[ U = 1 - \frac{m(U, V)}{s} \] (Beveridge Curve) \( (3) \)
Empirical Literature

Beveridge Curve

- **Britain**: Jackman et al. (1989) and Wall and Zoega (1997).
- **Canada**: Samson (1994).
- **Turkey**: Bayraktar-Saglam and Gunalp (2012).
Empirical Literature

Matching Function

- Blanchard and Diamond (1989), NBER
- Pissarides (1986), Coles and Smith (1996)
- Burda and Wyplosz (1994)
- Anderson and Burgess (2000)
- Warren (1996)
Unemployment and Vacancies

Data

Non-farm unemployment rate (TURKSTAT), kariyer.net vacancies, Turkish Employment Agency (TEA) vacancies, 2005 M1-2013 M2, job finding rates, Sengul (2012)
Unemployment and Vacancies
Turkish Beveridge Curve with Kariyer.net Data-Detrended

\[ y = -1.7366x \]
We find that Turkish Beveridge Curve depicts a negative relationship between vacancies and unemployment as theory suggests.

The unemployment-vacancies pairs are found to follow a counterclockwise trajectory around the empirical Beveridge curve.
Unemployment and Vacancies
Matching Function

\[ \frac{m(U,V)}{U} = \text{job finding rate} \quad \frac{m(U,V)}{V} = \text{vacancy yield} \]

\[ \frac{m(U_t,V_t)}{U_t} = f_t = \mu \left( \frac{V_t}{U_t} \right)^{1-\alpha}, \quad (4) \]

\[ \frac{\partial f_t}{\partial U_t} \frac{U_t}{f_t} = \alpha - 1 < 0 \quad \text{(congestion effect)} \quad (5) \]

\[ \frac{\partial f_t}{\partial V_t} \frac{V_t}{f_t} = 1 - \alpha > 0 \quad \text{(spillover effect of vacancies)} \quad (6) \]

\[ \log f_t = \log \mu + (1 - \alpha) \log \left( \frac{V_t}{U_t} \right) \]

Values in parenthesis represent standard errors.

*** implies significance at 0.01 level
The estimated Matching Function shows a positive relationship between job finding rate and tightness of labor market.

The parameters of the estimated matching function are found to be different for different data sets we use Kariyer.net vs Turkish Employment Agency.

Negative congestion effect of the pooled of unemployed is higher in TEA data.
Disaggregated Beveridge Curve

Reason of Unemployment

Kanîk, Sunel and Taşkın (CBRT)
Disaggregated Beveridge Curve
Unemployment Duration
Disaggregated Beveridge Curve
Age of Unemployment
Disaggregated Beveridge Curve
Gender of Unemployed

[Graph showing Beveridge curves for male and female unemployment rates over different years.]
Disaggregated Beveridge curve shows different patterns for different types of unemployed.

We find that Turkish Beveridge Curve depicts a negative relationship between vacancies and unemployment as theory suggests.

The unemployment-vacancies pairs are found to follow a counterclockwise trajectory around the empirical Beveridge curve.

The estimated Matching Function shows a positive relationship between job finding rate and tightness of labor market.

The parameters of the estimated matching function are found to be different for different data sets we use Kariyer.net vs Turkish Employment Agency.
Thank you!!
