

22 September 2020

Signs of Economic Recovery

Ozan Bakış,¹ Gökhan Dilek²

Executive Summary

In the light of fully-released July, and partially released August leading indicators, we expect GDP to expand by 2.7 percent on a year-on-year basis for the third quarter of 2020. According to seasonal and calendar adjusted data, we forecast quarter-on-quarter GDP growth as 8.3 percent for the third quarter.

Nearly all of the leading indicators record significant increases. The normalization steps taken at the start of the June supported the Turkish economy. At this point, we would like to remind the reader that we forecast the third quarter GDP growth with a limited dataset. It is likely that our predictions will change significantly when the August and September figures will be released. Yet already, we expect a positive figure for the third quarter GDP growth rate since the normalization process is in effect throughout the summer months.

Consumption spending increases rapidly

Compared to previous quarter, there are significant increases in all leading consumption indicators. According to our calculations based on the seasonally and calendar adjusted data, special consumption tax, durable consumption goods, consumption good imports, and non-durable consumption goods are the most rapidly increasing items with 50.3, 47.6, 36.8, and 25.2 growth rates respectively. Public spending, on the other hand, grows moderately with a rate of 0.6 percent (Table 2).

On a year-on-year basis, we see a similar outlook. While special consumption tax and consumption goods imports fastest growing items with a rate of 43.6 and 29.7 percent respectively, mortgage loans and consumer loans record 29.6 percent and 29.5 percent increases (Table 3). ¹ Betam, ozan.bakis@eas.bau.edu.tr

	2020Q2	2020Q3
Imports-cons. goods	-9.5	29.7
Mortgage loans	6.6	29.6
Consumer loans + CC	14.4	29.5
IPI-nondurable goods	-16.2	1.8
IPI-durable goods	-30.6	12.5
Special cons. tax	2.4	43.6
Public cons.	-2.6	6.0

Table 3:Consumption expenditurescompared to the same quarter of the pre-
vious year.

Investment indicators recover

According to seasonal and calendar adjusted data, our calculations suggest surges in all investment indicators except retail trade stock volume and public investment (6.0 and 6.5 percent contraction respectively). We expect increases in production volume in the last three months by 39.7 percent, intermediate goods production index by 24.3 percent, and investment goods imports by 16.4 percent. On the other hand, our calculations suggest that there will be milder growth rates in investment goods capacity utilization rate and commercial loans (8.8 and 5.4 percent respectively) (Table 4).

On a year-on-year basis, we see decreases in investment goods capacity utilization rate (minus 6.2 percent) and production volume in the last three months (minus 20.2 percent) while the other indicators record expansions. The strongest recovery is in the commercial credits with a rate of 30.8 percent. Investment goods imports follows with a growth rate of 22.5 percent. Intermediate goods production grows by 7.5 percent, public investment by 6.6 percent, and retail trade stock volume by 4.8 percent (Table 5).

Recovery in investment spending is a great news for the Turkish economy, since it has fallen since the second half of 2018 continuously.

In the third quarter of 2020, according to seasonal and calendar adjusted data, we expect exports to increase by 33.0 percent compared

to the previous quarter while imports to grow at a rate of 14.5 percent

When we compare the third quarter of 2020 with the same period of 2019, we forecast exports to raise by 2.3 percent, and imports 12.4

Foreign trade presents a mixes picture

(Table 6).

percent (Table 7).

2020Q2 2020Q3 IPI-inter. goods -18.8 24.3 CUR-invest. goods -16.2 8.8 Imports-invest. goods -17.9 16.4 Commercial loans + CC 17.5 5.4 Prod.-last 3 months -53.0 39.7 RT vol. of stock 7.8 -6.0 Public invest. -6.5 0.7

Table 4: Investment expenditures compared to the previous quarter. CUR: Capacity Utilization Rate.CUR is reported as percentage points changes unlike other indices; **RT vol. of stock**: Current volume of stock of retail trade sector; **Invest**.: Investment.

	2020Q2	2020Q3
IPI-inter. goods CUR-invest. goods Imports-invest. goods Commercial loans + CC Prodlast 3 months RT vol. of stock	-14.0 -14.7 5.6 19.0 -43.6 9.2	7.5 -6.2 22.5 30.8 -20.2 4.8
Public invest.	22.2	6.6

Table 5: Investment expenditures compared to the same quarter of the previous year.

	2020Q2	2020Q3
Exports	-19.8	33.0
Imports	-13.7	14.5
Exports excluding gold	-35.1	24.4
Imports excluding gold	-18.4	11.7

Table 6: Foreign trade compared to theprevious quarter.

	2020Q2	2020Q3
Exports	-23.8	2.3
Imports	-6.5	12.4
Exports excluding gold	-37.9	-22.5
Imports excluding gold	-11.7	2.3

The decrease in the exports excluding gold at a yearly rate of 22.5 percent indicates that the export growth is driven by gold. It is hard to state with the present data whether the net exports will contribute to the GDP growth.

Table 7: Foreign trade compared to thesame quarter of the previous year.

General Evaluation

Considering the other variables that we use in GDP forecasting, all seasonal and calendar day adjusted leading indicators show significant growth. The most eye-catching increase is in the services demand with 29.6 percent and in manufacturing industry production index with 28.6 percent. Retail trade price expectations shows 16.0 percent rise while investment expectations in 12 months and electricity consumption are expected to grow by 12.7 and 12.3 percent respectively (Table 8).

On a year-on-year basis, the services demand declines sharply with a figure of 33.9 percent despite its quarterly surge. Likewise, investment expectations in 12 months and capacity utilization rate decreases by 12.7 and 5.7 percent respectively. The yearly declines are due to the pandemic. The strongest yearly recovery is in the retail price expectations with 12.6 percent while manufacturing industry production index rises by 6.1 percent and electricity consumption by 4.9 percent (Table 9).

In the light of fully-released July, and partially released August leading indicators, we expect GDP to expand by 2.7 percent on a yearon-year basis for the third quarter of 2020. According to seasonal and calendar adjusted data, we forecast quarter-on-quarter GDP growth as 8.3 percent for the third quarter. Nearly all of the leading indicators record significant increases. The normalization steps taken at the start of the June supported the Turkish economy. At this point, we would like to remind the reader that we forecast the third quarter GDP growth with a limited dataset. It is likely that our predictions will change significantly when the August and September figures will be released. Yet already, we expect a positive figure for the third quarter GDP growth rate since the normalization process is in effect throughout the summer months.

BOX: EXPLANATIONS

Explanation on seasonal and calendar day adjustment:

While forecasting quarter-on-quarter GDP growth rate, we adjust all series for seasonal and calendar day effects. If there is an adjusted series released by institutions, we use this released adjusted series and if not, BETAM performs seasonal and calendar day adjustments. Status of variables used in this brief can be summarized as follows:

- Central Bank of the Republic of Turkey (TCMB): Capacity utilization rate of manufacturing industry (CUR), Real sector confidence index.
- Turkstat (TUIK):Industrial production index (IPI) and its sub-components; export, import and import subcomponents with respect to goods categories (intermediate goods, investment goods and consumption goods); sectoral confidence indices and its components (retail trade, services and construction sectors)
- Betam: The rest of leading indicators.

Explanation on leading indicators: Betam share three forecasts for each quarter. For some indicators of the quarter, of which growth rate is forecasted, last two months' observations and for others last month's observation are missing when we run forecasting model. While estimating growth rates of leading indicators, for missing months we use forecasts based on previous observations of each series. Since there are no missing montly observations in series while running the third forecast, there is no need for this forecast.

Explanation on forecasting model:

For the direct forecast of GDP we use 16 leading indicators. While forcasting the components of GDP (consumption, investment, export and import) we use 26 leading indicators. We prefer to represent variables, which are remarkable within the current period and successful in the forecast, instead of representing all of them in the research brief and tables.

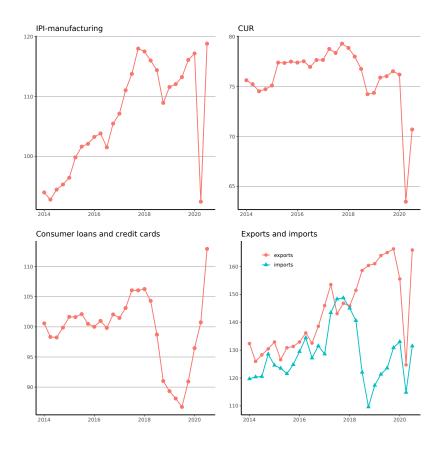

Figure 1: Seasonally and calendar day adjusted quarterly leading indicators. Consumer credits and individual credit cards in the first quarter of 2016 are indexed at 100.
