Executive Summary

In the light of fully-released October, November, and December leading indicators, we expect GDP to expand by 6.7 percent on a year-on-year basis for the fourth quarter of 2020. According to seasonal and calendar adjusted data, we forecast quarter-on-quarter GDP growth to be 3.5 percent for the last quarter of 2020.

Nearly all of the leading indicators record significant increases. It is evident that the pandemic measures introduced at the start of December have not impacted the economy negatively. We think that excluding economic activities from the scope of prohibitions is decisive in this result.

GDP growth forecasts	2020Q4
Quarter-on-quarter	3.5
Year-on-year	6.7

Table 1: Periodical and annual real GDP growth forecasts. Source: Betam. **NOTE:** "Quarter-on-quarter" growth rate refers to seasonally and calendar-day adjusted real GDP growth forecast; "Year-on-year" growth rate refers forecasted real GDP growth compared to the same quarter of the previous year.

Consumption spending increases

Compared to the previous quarter, there are significant increases in all leading consumption indicators except mortgage loans and special consumption tax. According to our calculations based on the seasonally and calendar adjusted data, public spending increases by 8.9 percent, consumption good imports by 7.9 percent, and durable consumption goods by 5.8 percent compared to the third quarter. Special consumption tax and mortgage loans, on the other hand, decrease considerably with a rate of minus 4.0 and 2.2 percent respectively. The cessation of the low interest mortgage programs of the public banks is the reason that the mortgage loans are decreasing (Table 2).

On a year-on-year basis, we see growth in all consumption indicators. Special consumption tax rapidly increases with 39.4 percent rate while consumer and mortgage loans grow by 26.9 and 26.0 percent respectively. Consumption good imports record 21.1 percent rise (Table 3).

	2020Q3	2020Q4
Imports-cons. goods	34.7	7.9
Mortgage loans	21.3	-2.2
Consumer loans + CC	14.7	0.5
IPI-nondurable goods	27.1	3.8
IPI-durable goods	46.4	5.8
Special cons. tax	47.1	-4.0
Public cons.	0.1	8.9

Table 2: Consumption expenditures compared to the previous quarter. **IPI:** Industrial production index; **Cons.:** Consumption tax; **CC:** Credit Cards.

	2020Q3	2020Q4
Imports-cons. goods	23.2	21.1
Mortgage loans	33.0	26.0
Consumer loans + CC	32.2	26.9
IPI-nondurable goods	6.2	7.5
IPI-durable goods	18.6	17.2
Special cons. tax	40.8	39.4
Public cons.	-2.9	1.4

Table 3: Consumption expenditures compared to the same quarter of the previous year.

Investments keep growing

According to seasonal and calendar adjusted data, our calculations suggest surges in all investment indicators compared to the previous quarter. We expect strong increases in production volume in the last three months by 15.6 percent and investment goods imports by 10.9 percent while a milder but considerable rate of growth for intermediate good production index with 5.5 percent (Table 4).

On a year-on-year basis, we see a small decrease in investment goods capacity utilization rate (minus 2.5 percent). The most rapid increases are recorded in commercial credits with 34.4 percent while investment goods imports grow by 28.1 percent. The public investment also records a significant rise with 22.6 percent in the fourth quarter of 2020 compared to the same period of the previous year (Table 5).

	2020Q3	2020Q4
IPI-inter. goods	28.9	5.5
CUR-invest. goods	10.6	3.0
Imports-invest. goods	23.4	10.9
Commercial loans + CC	7.8	4.8
Prod.-last 3 months	94.0	15.6
RT vol. of stock	-8.5	1.1
Public invest.	10.5	1.5

Table 4: Investment expenditures compared to the previous quarter. **CUR:** Capacity Utilization Rate.CUR is reported as percentage points changes unlike other indices; **RT vol. of stock:** Current volume of stock of retail trade sector; **Invest.:** Investment.

	2020Q3	2020Q4
IPI-inter. goods	10.7	12.7
CUR-invest. goods	-5.0	-2.5
Imports-invest. goods	19.2	28.1
Commercial loans + CC	32.1	34.4
Prod.-last 3 months	1.4	12.4
RT vol. of stock	3.7	2.3
Public invest.	-15.5	22.6

Table 5: Investment expenditures compared to the same quarter of the previous year.

Imports grow faster than exports

In the fourth quarter of 2020, according to seasonal and calendar adjusted data, we expect exports to increase by 7.1 percent compared to the previous quarter while imports to grow at a rate of 1.6 percent (Table 6).

When we compare the fourth quarter of 2020 with the same period of 2019, we forecast exports and imports to grow by 4.9 percent and 9.5 percent respectively (Table 7).

The faster increase in imports than exports in the last quarter indicates that the contribution of foreign trade to economic growth will be negative.

	2020Q3	2020Q4
Exports	29.9	7.1
Imports	21.9	1.6
Exports excluding gold	29.8	18.4
Imports excluding gold	15.6	9.0

Table 6: Foreign trade compared to the previous quarter.

	2020Q3	2020Q4
Exports	-1.6	4.9
Imports	16.7	9.5
Exports excluding gold	-21.3	-6.3
Imports excluding gold	-1.6	4.8

Table 7: Foreign trade compared to the same quarter of the previous year.

General Evaluation

Considering the other variables that we use in GDP forecasting, all seasonal and calendar day adjusted leading indicators show increases. The most eye-catching increases are in investment expectations in 12 months with 16.8 percent and in the services demand with 11.8 percent. Other indicators record more moderate growth rates (Table 8).

On a year-on-year basis, services demand and capacity utilization rate show decreases (minus 10.7 percent and minus 1.3 percent respectively) despite their quarterly growth. The year-on-year declines are mainly due to the Covid-19 pandemic. The strongest yearly recovery is recorded in manufacturing IPI by 10.8 percent while retail sector price expectations increases by 9.2 percent. The electricity consumption, also, grows at a considerable rate (4.5 percent growth) (Table 9).

In the light of fully-released October, November, and December leading indicators, we expect GDP to expand by 6.7 percent on a year-on-year basis for the fourth quarter of 2020. According to seasonal and calendar adjusted data, we forecast quarter-on-quarter GDP growth to be 3.5 percent for the last quarter of 2020. Nearly all of the leading indicators record significant increases. It is evident that the pandemic measures introduced at the start of December have not impacted the economy negatively. We think that excluding economic activities from the scope of prohibitions is decisive in this result.

	2020Q3	2020Q4
IPI-manufacturing	32.3	5.2
RT price exp.	13.3	0.2
CUR	9.2	2.5
Ser. demand turnover	51.9	11.8
Expected invest.-12m	16.8	16.8
Electricity cons.	14.8	3.1

Table 8: Some of leading indicators compared to the previous quarter. **RT price exp.:** Expected price for the retail sector (next 3 months); **Ser. demand turnover:** Demand for services (last 3 months), **Expected invest.-12m:** Investment expectations (next 12 months) ;**Expected invest.-12m:**: Investment expectations (next 12 months)

	2020Q3	2020Q4
IPI-manufacturing	9.3	10.8
RT price exp.	12.9	9.2
CUR	-3.5	-1.3
Ser. demand turnover	-17.3	-10.7
Expected invest.-12m	-9.5	1.0
Electricity cons.	3.6	4.5

BOX: EXPLANATIONS

Explanation on seasonal and calendar day adjustment:
While forecasting quarter-on-quarter GDP growth rate, we adjust all series for seasonal and calendar day effects. If there is an adjusted series released by institutions, we use this released adjusted series and if not, BETAM performs seasonal and calendar day adjustments. Status of variables used in this brief can be summarized as follows:

- Central Bank of the Republic of Turkey (TCMB): Capacity utilization rate of manufacturing industry (CUR), Real sector confidence index.
- Turkstat (TUIK):Industrial production index (IPI) and its sub-components; export, import and import sub-components with respect to goods categories (intermediate goods, investment goods and consumption goods); sectoral confidence indices and its components (retail trade, services and construction sectors)
- Betam: The rest of leading indicators.

Explanation on leading indicators: Betam share three forecasts for each quarter. For some indicators of the quarter, of which growth rate is forecasted, last two months' observations and for others last month's observation are missing when we run forecasting model. While estimating growth rates of leading indicators, for missing months we use forecasts based on previous observations of each series. Since there are no missing montly observations in series while running the third forecast, there is no need for this forecast.

Explanation on forecasting model:
For the direct forecast of GDP we use 16 leading indicators. While forcasting the components of GDP (consumption, investment, export and import) we use 26 leading indicators. We prefer to represent variables,which are remarkable within the current period and successful in the forecast, instead of representing all of them in the research brief and tables.

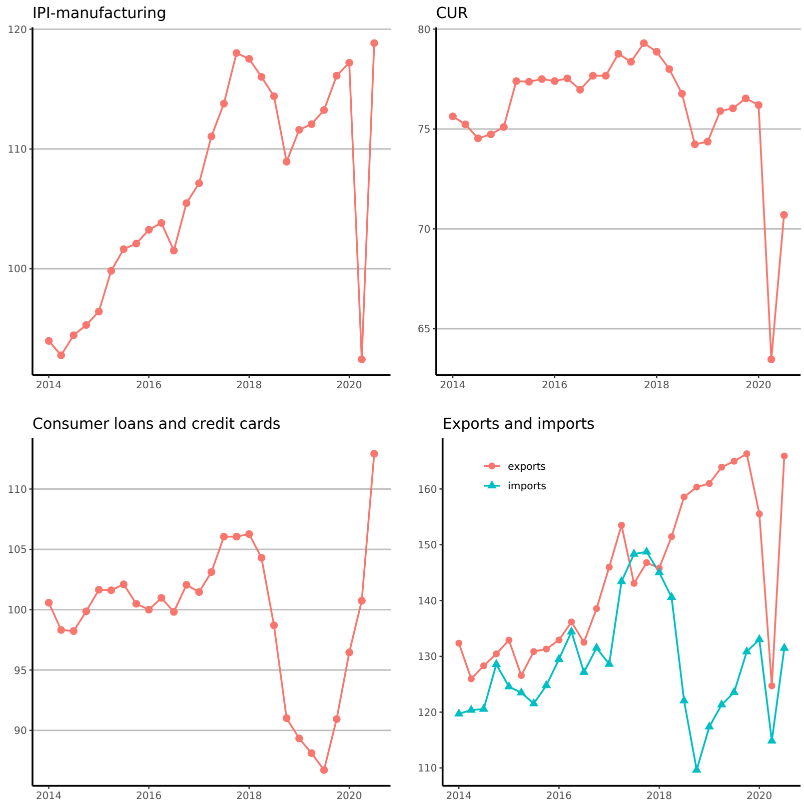

Figure 1: Seasonally and calendar day adjusted quarterly leading indicators. Consumer credits and individual credit cards in the first quarter of 2016 are indexed at 100.
