

Low Quarter-on-Quarter Growth

Ozan Bakış,¹ Gökhan Dilek²

Executive Summary

In the light of fully-released January, and partially-released February leading indicators, we expect GDP to expand by 5.5 percent on a year-on-year basis for the first quarter of 2021. According to seasonal and calendar adjusted data, we forecast quarter-on-quarter GDP growth to be 0.7 percent.

The leading indicators record mostly increases on year-on-year basis while most of them contract quarterly. We, also, calculate significant yearly and quarterly decreases in some of the leading indicators.

Mixed outlook in consumption spending

Compared to the previous quarter, except for durable and non-durable consumption goods (7.0 percent and 1.3 percent increases respectively), all leading consumption indicators decrease. According to our calculations based on the seasonally and calendar adjusted data, special consumption tax, and consumption good imports are the most severely contracted indicators with respectively 15.9 and 4.7 percent rates. Mortgage loans fall by 3.8 percent while consumer loans decrease by 2.5 percent (Table 2).

On a year-on-year basis, we see growth in all consumption indicators except consumption goods imports (minus 11.1 percent). The most important growth rates are in consumer and mortgage loans with 17.3 and 16.9 percent rates respectively while the yearly growth rate in special consumption tax is 10.7 percent, and 9.8 percent in durable consumption goods. Public spending, on the other hand, remains nearly the same (Table 3).

GDP growth forecasts	2020Q4
Quarter-on-quarter	0.7
Year-on-year	5.5

Table 1: Periodical and annual real GDP growth forecasts. Source: Betam. **NOTE:** "Quarter-on-quarter" growth rate refers to seasonally and calendar-day adjusted real GDP growth forecast; "Year-on-year" growth rate refers forecasted real GDP growth compared to the same quarter of the previous year.

	2020Q4	2021Q1
Imports-cons. goods	11.3	-4.7
Mortgage loans	-2.1	-3.8
Consumer loans + CC	0.6	-2.5
IPI-nondurable goods	3.0	1.3
IPI-durable goods	6.4	7.0
Special cons. tax	-7.8	-15.9
Public cons.	2.1	-2.1

Table 2: Consumption expenditures compared to the previous quarter. **IPI:** Industrial production index; **Cons.:** Consumption tax; **CC:** Credit Cards.

	2020Q4	2021Q1
Imports-cons. goods	22.2	-11.1
Mortgage loans	26.0	16.9
Consumer loans + CC	26.9	17.3
IPI-nondurable goods	7.7	2.8
IPI-durable goods	17.6	9.8
Special cons. tax	39.4	10.7
Public cons.	1.4	0.6

Table 3: Consumption expenditures compared to the same quarter of the previous year.

Signs of contraction in investments

According to seasonal and calendar adjusted data, our calculations suggest important quarterly declines in all investment indicators except in intermediate good production index and investment goods capacity utilization rate (4.9 and 1.5 percent respectively). We expect 5.9 percent decrease in retail stocks, 3.6 percent in commercial loans while we forecast the quarterly reduction in public investments to be 2.7 percent (Table 4).

On a year-on-year basis, we see that some investment indicators change in a completely different directions. Public investments decline surprisingly at a rate of 59.0 percent while the yearly growth rate in commercial credits reaches 23.8 percent high. The production volume in the last 3 months surges significantly by 13.9 percent (Table 5).

Exports and imports excluding gold decreases

In the first quarter of 2021, according to seasonal and calendar adjusted data, we expect exports to grow by 4.2 percent compared to the previous quarter while imports to decrease at a rate of 4.8 percent (Table 6).

When we compare the first quarter of 2021 with the same period of 2020, we forecast exports and imports to grow by 5.6 percent and 5.5 percent respectively (Table 7).

Exports and imports excluding gold record both yearly and quarterly decreases. Exports excluding gold decline 1.1 percent on a quarter-on-quarter basis while 9.8 percent on a year-on-year basis. Imports excluding gold fall at 4.9 and 10.0 percent rates respectively.

It will not be surprising to see in our next forecasts that imports will be weighed down further by the depreciation of TL.

	2020Q4	2021Q1
IPI-inter. goods	5.7	4.9
CUR-invest. goods	3.0	1.5
Imports-invest. goods	16.6	-1.0
Commercial loans + CC	4.8	-3.6
Prod.-last 3 months	15.6	-1.2
RT vol. of stock	1.1	-5.9
Public invest.	-5.5	-2.7

Exports	0.9	5.6
Imports	-0.2	5.5
Exports excluding gold	-4.6	-9.8
Imports excluding gold	4.4	-10.0

Table 7: Foreign trade compared to the same quarter of the previous year.

General Evaluation

Considering the other variables that we use in GDP forecasting, most of the seasonal and calendar day adjusted leading indicators show increases. The most eye-catching increases are in investment expectations in 12 months with 4.8 percent and in manufacturing production index with 2.5 percent. On the other hand, retail price expectations and electricity consumption decrease by 5.6 and 0.3 percent (Table 8).

On a year-on-year basis, services demand and capacity utilization rate show decreases (minus 15.0 percent and minus 0.2 percent respectively) despite their quarterly growth. The strongest yearly surges are recorded in investment expectations in 12 months (9.2 percent) and in electricity consumption (8.8 percent) (Table 9).

In the light of fully-released January, and partially-released February leading indicators, we expect GDP to expand by 5.5 percent on a year-on-year basis for the first quarter of 2021. According to seasonal and calendar adjusted data, we forecast quarter-on-quarter GDP growth to be 0.7 percent. The leading indicators record mostly increases on year-on-year basis while most of them contract quarterly. We, also, calculate significant yearly and quarterly decreases in some of the leading indicators.

	2020Q4	2021Q1
IPI-manufacturing	5.2	2.5
RT price exp.	0.2	-5.6
CUR	2.5	0.4
Ser. demand turnover	11.8	1.7
Expected invest.-12m	16.8	4.8
Electricity cons.	3.2	-0.3

BOX: EXPLANATIONS

Explanation on seasonal and calendar day adjustment:

While forecasting quarter-on-quarter GDP growth rate, we adjust all series for seasonal and calendar day effects. If there is an adjusted series released by institutions, we use this released adjusted series and if not, BETAM performs seasonal and calendar day adjustments. Status of variables used in this brief can be summarized as follows:

- Central Bank of the Republic of Turkey (TCMB): Capacity utilization rate of manufacturing industry (CUR), Real sector confidence index.
- Turkstat (TUIK): Industrial production index (IPI) and its sub-components; export, import and import sub-components with respect to goods categories (intermediate goods, investment goods and consumption goods); sectoral confidence indices and its components (retail trade, services and construction sectors)
- Betam: The rest of leading indicators.

Explanation on leading indicators: Betam share three forecasts for each quarter. For some indicators of the quarter, of which growth rate is forecasted, last two months' observations and for others last month's observation are missing when we run forecasting model. While estimating growth rates of leading indicators, for missing months we use forecasts based on previous observations of each series. Since there are no missing monthly observations in series while running the third forecast, there is no need for this forecast.

Explanation on forecasting model:

For the direct forecast of GDP we use 16 leading indicators. While forecasting the components of GDP (consumption, investment, export and import) we use 26 leading indicators. We prefer to represent variables, which are remarkable within the current period and successful in the forecast, instead of representing all of them in the research brief and tables.

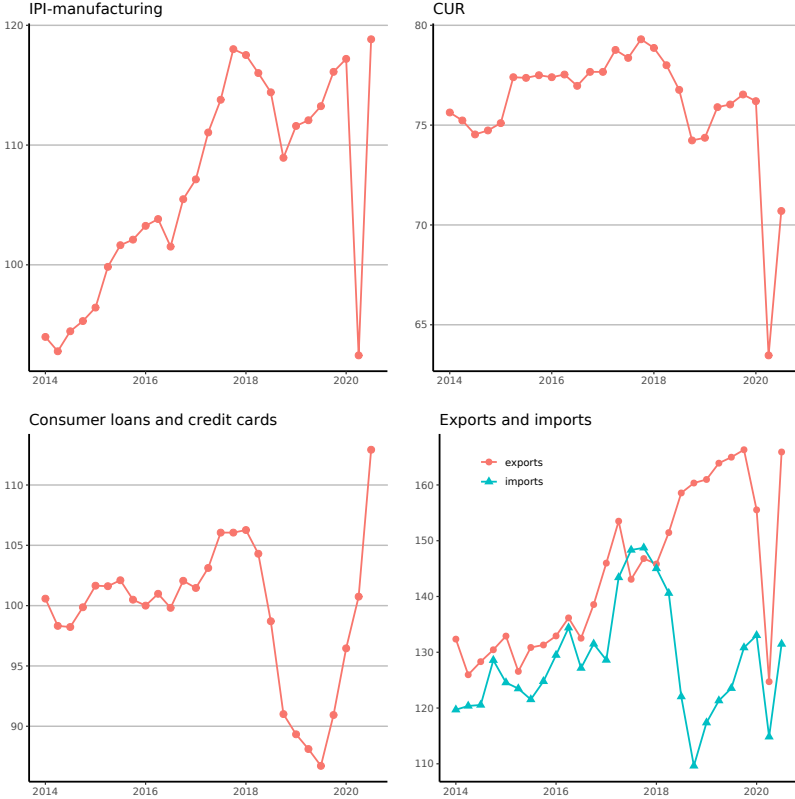

Figure 1: Seasonally and calendar day adjusted quarterly leading indicators. Consumer credits and individual credit cards in the first quarter of 2016 are indexed at 100.
